

See for yourself!

Macular disease is the biggest cause of sight loss in the UK. One of the first signs of macular disease is distortions in sight. This handy Amsler grid could help you monitor your vision and detect changes.

There is only one way to Beat Macular Disease for good. We must fund much more research now, until we find a cure, or find treatments that stop it in its tracks.

To support people affected by macular disease now, the Macular Society provides a range of support, information and services.

Monitor your vision in case it changes

It is important to spot early signs of changes in your vision. Hold the Amsler grid at eye level about 30cm from your eyes. Wear your usual reading glasses if needed, but not varifocals. Cover one eye at a time and look at the central dot. If any lines appear wavy, distorted, blurry or have gaps, contact your optician or eye doctor immediately.
